

COVID-19 vaccine covered at 100%

"Vaccination is the only way back to a normal workplace and to life as we once knew it." —Dr. Angela Riley, Medical Director, UNITE HERE HEALTH

KNOW THE FACTS:

Getting vaccinated is more important than ever

- The new COVID-19 Delta variant is more contagious than the original strain—even more contagious than the common cold or the flu
• Almost all hospitalizations and deaths from COVID-19 are among people who have NOT been vaccinated
• The more the virus spreads among people who are not vaccinated, the more likely it is to mutate and become even more deadly

Vaccine resources: uhh.org/vaccine

The vaccine is safe and effective

- Uses modern technology that has been perfected for more than 20 years
• Tested on more than 70,000 people in three phases—the same process all drugs and vaccines go through before they're approved
• Cannot give you COVID-19 and does not contain the virus (it contains a set of instructions to tell your cells how to fight off COVID-19 if you become infected)
• Given to more than 345 million people worldwide, the vaccine has shown to be safe and effective

Table with 3 columns: Vaccine type, Number of doses, When you're fully vaccinated. Rows include Pfizer, Moderna, and Johnson & Johnson.
